Rachel Sona Iswary

MBA at Michigan Ross | Ex- HSBC, Tata | IIT | Technology & Sustainability Enthusiast

Ann Arbor, Michigan, United States

Summary

With over four years of experience working at the intersection of AI, data analytics, and financial services, where I have used technology to turn complex data into insights that support better decision making in global contexts. At HSBC, I focused on investment management and quantitative analysis with an emphasis on ESG funds, integrating impact focused metrics into portfolios to support more inclusive and sustainable investment strategies across international markets.

Earlier in my career at Tata Consultancy Services, I built AI driven analytics solutions using machine learning, Python, and large scale data systems for global clients. This experience shaped my belief that responsibly applied AI can improve transparency, efficiency, and access to financial services, especially for underserved communities worldwide.

I am currently pursuing my MBA at the University of Michigan's Ross School of Business, where I am strengthening my business and leadership capabilities with a global perspective. I am passionate about using AI and technology to advance financial inclusion and to help build sustainable solutions that create long term economic opportunity and meaningful global impact.

Experience

HSBC

3 years

Product Manager - Quantitative and AI Analytics

October 2023 - August 2025 (1 year 11 months)

Bengaluru

Analyst - Quantitative Analytics

September 2022 - October 2023 (1 year 2 months)

Bengaluru

Tata Consultancy Services

Software Engineer

July 2021 - September 2022 (1 year 3 months)

Hyderabad

- Analyzed market trends via web-scraped analytics to enhance operational resiliency portal, supporting 50+ banking professionals in managing \$10B+ across global portfolios
- Influenced key stakeholders to migrate on-premise SQL database to the Cloud, speeding up releases for 100K+ users and enhancing system stability by 35%
- Deployed 10+ ETL workflows and real-time API pipelines to monitor \$50B+ in financial assets, supporting strategic product initiatives, ensuring 100% uptime in risk alerts
- Remodeled queries across 15+ data streams within client-facing platform, to boost analysis speed and improving query performance efficiency by 40%
- Developed GTM strategy leveraging machine learning to enhance analytical insights for investment products across digital channels, achieving 96% forecasting model accuracy

NovateAI - IIT Guwahati

Graduate Student Researcher

September 2019 - January 2020 (5 months)
